

Chemquest Topics

Topic No:-1

Global demand for biodegradable plastics is rising, yet most current biopolymers suffer from poor mechanical strength, high production costs, and limited scalability. Design a sustainable polymer system that balances biodegradability, mechanical durability, and cost-effectiveness. Your solution should address raw material sourcing, processing techniques, lifecycle analysis, and potential industrial applications in packaging or medical devices.

Topic No:- 2

Green Hydrogen Production via Photo-Electrocatalysis: Challenges & Pathways to Commercialization

Topic No:- 3

Application of Machine Learning/Artificial Intelligence for Predictive Maintenance in Chemical Industry

Timeline of submissions

Time line

1. Submissions of the Final presentations of IDP on 10/01/2025)

On the mail id ts.ta@stumarj.ictmumbai.edu.in, before 22:00, the subject of the mail should be "Chemquest topic" final Presentation submission by "team name"

Example: - Green Hydrogen Production via Photo-Electrocatalysis: Challenges & Pathways to Commercialization, final Presentation submission by Team AAKRITI
